As data multiplies exponentially, literally millions of events could be flooding your network daily, including new security threats. How can you possibly sift through this ever-growing quantity of information to determine if an attack has exploited devices on your network?

Discover how the Cisco Security Monitoring, Analysis, and Response System (MARS) can empower you to locate, manage, and eliminate threats in real time without adding more IT staff or outside resources. Learn how you can go far beyond its basic capabilities to:

- Create a comprehensive, cost-effective, and easy-to-use security command and control solution
- Collect and analyze data from every device on your network, including third-party technologies
- Resolve and prioritize security threats
- Revolutionize your anomaly detection capabilities by capturing and analyzing NetFlow
- Provide quick and easy audit compliance reports

Do not miss this opportunity to learn how Cisco Security MARS can transform your network security strategies.
