

Real-World Experience, Real-World Results

Satisnet Real-World MARS Admin Training

COURSE DESCRIPTION

This 2 day class covers the information you will require in order to become proficient in installing, supporting, and troubleshooting the Cisco Security Monitoring, Analysis, and Reporting [CS-MARS] product in your environment. This class uses the Priveon Real-World Training System to ensure you come away with practical and memorable techniques and information. Real-World training involves instruction by individuals who have actual field experience with the CS-MARS product and is delivered via a series of scenario based hands on labs. This class emphasizes skill application where you will learn by doing in challenging scenarios that have all occurred in actual customer environments

COURSE OBJECTIVES

- Understand the distributed CS-MARS architecture
- Learn the various CS-MARS models and scaling considerations
- Create and modify user accounts and roles
- Learn how to successfully discover and integrate the security devices in your environment
- Learn to minimize false positives and track events into incidents
- Learn to integrate detection with incident response procedures
- Learn and understand the use of Queries and Query Types to drill down on Events, Incidents and Specific Session Data
- Create custom reports to assist with security analysis and compliance reporting

SUGGESTED PREREQUISITES

- An understanding of Windows-based operating systems
- An understanding of how security devices generate events via syslog
- Network Communication Basics
- Security and Acceptable Use policies

Training Course Overview

CS-MARS Admin Training

DURATION: 2 Days

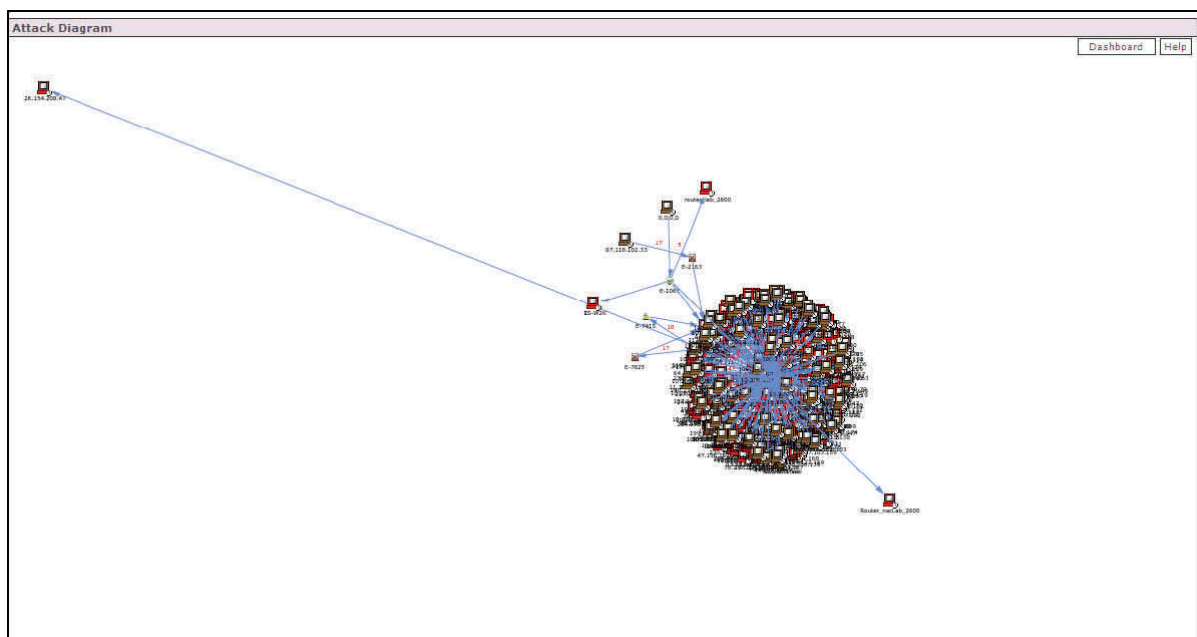

COST: £ 1395.00

COURSE OUTLINE

On Day 1: Build & Configure, you will learn the foundational concepts needed to Plan and Design CS-MARS architectures. You will learn how to drill down into events and create the role-based access control needed to correctly empower your users to use the MARS.

On Day 2: Operate & Tune, you will learn how to design your own queries, rules, & reports as you use the system-supplied objects as a guideline. You will create and assign cases using the built-in case management features and customize reports as a method to speed your time to resolution. Best Practices are shared and discussed, with specific examples that can be used for your environment

Best Practices are shared and discussed, with specific examples that can be used for your environment.
